Google Chrome 'Article For You', Mix, Flipboard, TopBuzz etc.

Motivation

In this summer, Google Chrome added a new feature 'Articles for you' on their browser's home screen and it really intrigued me a lot. I wanted to customize it but there was no option then. I got the motivation from it as students spend a lot of time reading useless posts on facebook why not provide them with something interesting. This app of mine would get viral articles from different news sites and show it to user in one place.

Project Description

An app that will include viral articles from news and other blogging sites. In the beginning it will show the viral news and with the passage of time things will get better and we'll add the option of new, viral, controversial content. Api I'm intending to use is of 'newsapi.org' its a rest-api that use json to communicate.

Features

Infinite scrolling of app generated articles. In app browser to read articles. Save for offline read. Search articles on the web(limited famous sites) using keyword. Many More.
